**JCI to offer integrated email security service,
the latest addition to its security solution line up**

On Monday, March 12, 2007, Japan Communications Inc. (JCI) will begin offering “Postini Perimeter Manager Enterprise Edition”, an integrated email security service equipped with multiple anti-virus engines and spam filtering technologies. The service includes email filtering, archiving and encryption to remove viruses and spam from corporate networks, and to promote compliance.

Email is now an absolute must-have necessity for business. However, communication over email can cause a range of problems for businesses, including decreased efficiency, data loss and information leakage caused by spam, viruses or spyware. These issues are becoming increasingly important from an internal control perspective, and thus interest in email encryption and archiving is growing.

JCI, a one-stop provider of solutions such as communication, security and customer care, is committed to understanding the needs and concerns of each and every company that wants to take advantage of mobile computing. As email security is an area of serious and growing concern for businesses, JCI will offer Postini Perimeter Manager Enterprise Edition, a solution actively used by more than 10 million people in approximately 36,000 businesses around the world.

Postini is a US company that has been providing email security services since its incorporation in 1999, and has established 6 data centers worldwide, including North America and Europe. Postini processes over 1.2 billion emails.

JCI will start sales of Postini Perimeter Manager Enterprise Edition, which offers Postini’s Software as a Service email security solutions for businesses. Before email arrives at the customer’s mail server, unwanted email such as spam, viruses and phishing emails are blocked or rerouted, and only safe email is allowed through. There is no need for the enterprise to purchase any new software or hardware. Rather, with Postini, it is easy to deploy a high performance email security service at a low cost in a short timeframe. Furthermore, within the Enterprise it is possible to set policies for individuals and groups, and to manage each user’s disk usage, total usage and statistical information.

This service can process email filtering and transmission on one SMTP connection. The customer’s email is not saved to the processing server but is afforded privacy through protected transmission and high speed processing. Further, by employing numerous anti-virus engines and spam filtering technologies, this service protects against viruses and spam.

Enterprise compliance measures such as email archiving and encryption are also being offered as optional services. A breakdown of the major optional services is provided below:

◆ Email Archiving

This service saves mail and attachments for all users or specified groups that are transmitted through the processing server. These saved emails and attachments can then be searched for specific criteria. This service saves email such that it cannot be deleted or altered, and can be used to prove that an enterprise is conducting business in a suitable and appropriate manner.

◆ Email Encryption

Using TLS or SSL, customers can easily set up encrypted email communication with business partners and end users. Even if the recipient of the email has not purchased this service, they can read the body of the email and their reply will be encrypted.

JCI offers its existing security platforms, such as Secure PB and CentraPolicy, with bundled data connectivity. However, the email security service sits above the functionality of these platforms and can thus be used either on its own or as an integrated platform. JCI is committed to providing complete platforms and application services as part of our mission to become a provider of integrated communication and security solutions.

About JCI

Japan Communications Inc. (JCI) was the first to introduce the Mobile Virtual Network Provider (MVNO) business model to the world in 1996. JCI, a publicly listed company in Japan (JPN-9424), is the first and the largest data MVNO in the world. It has pioneered wireless data solutions, which address particular needs of specific customers both in consumer and enterprise markets. Operating as an integrator of wireless and fixed network services with information technology, it is the leading provider of end-to-end wireless data solutions.

b-mobile, InfinityCare® and the Telecom Battery are registered trademarks of JCI. Company and product names mentioned in the document are trademarks or registered trademarks of their respective companies.
